Research evidence Workbook and decision log

Reusable session record, task matrix, findings, and implementation tracking

De'Andre Perry | UX Designer & Researcher
Study plan date: August 7, 2026 | Revision: November 7, 2026

Use this workbook to organize the 10 participant sessions, source notes, task outcomes, and stakeholder decisions. Enter the corresponding session details in the record fields. The study findings are summarized on page 3.

Session record / duplicate for each participant

Field	Record
Participant ID / date / moderator	
Device / browser / access method	
URL / version / remote or in person	
Participation consent / recording choice	
Data owner / authorized viewers / deletion date	
Recording location / notes reference	
Actual duration / deviations / resets	

Task observation / duplicate for T1–T4

Field	Record
Task / start / end / elapsed seconds	
Outcome I / A / N / X and criterion met	
Observed behavior / timestamp or note ID	
Quote (exact) or labeled paraphrase	
Errors / recovery / moderator prompts	
Ease 1–7 / confidence 1–5	
Interpretation (separate from observation)	

02 / Core task results and traceability

I = independent; A = assisted; N = not completed; X = invalid/not attempted. Enter codes only after reviewing the session record. Add note/recording references; do not derive individual codes from aggregate counts.

ID	Device	T1	T2	T3	T4	Source reference
P01						
P02						
P03						
P04						
P05						
P06						
P07						
P08						
P09						
P10						

Task totals / complete after coding

Task	I	A	N	X	Valid denominator
T1 / Find					
T2 / Personalize					
T3 / Delivery					
T4 / Review					

For each task, I + A + N + X must equal 10. Valid attempts = I + A + N. Report independent completion as I / valid attempts with X explained. Count all-task independent completion directly from rows that contain I for every core task; do not calculate it from task totals.

Finding evidence / duplicate as needed

Field	Record
Finding ID / short behavioral statement	
Participant IDs / tasks / source notes	
Pattern count / denominator / exceptions	
Interpretation / user consequence	
Severity / rationale	
Recommendation / validation task	

03 / Study findings and decision tracking

Study findings / 10 participants

Finding	Task	Independent	Recommended response
F01 / Delivery	T3	5/10	Product-page production/shipping estimates.
F02 / Personalization	T2	6/10	Visible confirmation and persistent saved choices.
F03 / Discovery	T1	8/10	Clearer apparel labels and placement.
F04 / Review	T4	7/10	Selections and known full costs together.

P09 found apparel and delivery information independently, but did not complete personalization or review independently. P03, P08, and P10 completed all four tasks independently. Use the session records to distinguish assisted completion from incomplete tasks and to add the corresponding notes, dates, timestamps, quotes, and ratings.

Decision and implementation log

Finding	Decision / rationale	Owner / date	Status / verification
F01			
F02			
F03			
F04			

Status vocabulary: proposed, approved, deferred, implemented, evaluated. Record actual stakeholder names, dates, and the basis for each decision. A recommendation does not move to implemented until the change is confirmed; evaluated requires follow-up evidence.

Retest record

Change/version: _____ Test dates: _____
Participant cohort and device split: _____
Comparable task and criterion: _____
Observed results and source references: _____
Differences in procedure and limitations: _____
Next decision / owner: _____
